## Test Report

Sound absorption of the fabric article “Shake”

**Customer:** rohi Stoffe GmbH  
Schoenlinderstrasse 1  
D-82538 Geretsried  
Germany

**Test Report No.:** 19010

**Date:** May 20, 2019

**Person in charge:**  
Dr.-Ing. Roman Tschakert

.....

This report consists of 9 pages. It should not be reproduced or published other than in full.

<b>A. Appendix</b>	<b>5</b>

## 1. Scope of measurements

The sound absorption of a fabric article was evaluated in the reverberation room at the Department of Engineering Acoustics. The test object was:

- a) Shake plane  
95 % WV / 5 % PA, mass per unit area 440 g/m<sup>2</sup>,  
1 curtain size 3000 × 3500 mm, 50 mm wrapped for hanging, plane,  
type G-100 mounting with 100 mm distance from the wall,
- b) Shake gathered  
95 % WV / 5 % PA, mass per unit area 440 g/m<sup>2</sup>,  
2 curtains size 3000 × 3500 mm, gathered, 100 % gathering,  
type G-100 mounting with 100 mm distance from the wall.

Photos of the test setup are given in Figure 1.

## 2. Procedure

The sound absorption was determined in one-third-octave bands according to the ISO 354 [5]. The practical sound absorption coefficient according to ISO 11654 [6] for each octave band was calculated by averaging the three one-third-octave absorption coefficients within the octave. By shifting a reference curve the weighted sound absorption coefficient and the sound absorption class were determined.

The mounting of each test object, the measurement procedure and the climatic conditions are given in the test certificates in the appendix A.

Person in charge: Roman Tschakert (TU Berlin)  
Operators: Arne Hoelter (TU Berlin)  
Artur Paszkiewicz (TU Berlin)

## 2.1. Measuring equipment

### *Measuring devices:*

- four NTi XL2 sound level meter, firmware 4.10 ,S.-No. A2A-02022-C0, S.-No. A2A-10883-E0, S.-No A2A-10886-E0, S.-No. A2A-10887-E0 <sup>1 2</sup> ,
- eight ½" microphones PCB Piezotronics Inc. type 378B2, S.-No. 112513 to 112518 and S.-No. 112521 to 112522 <sup>1</sup> ,
- calibrator Norsonic type 1251, S.-No. 20833 <sup>3</sup> ,
- dodekaeder loudspeaker Norsonic type K100/12, S.-No. 534 <sup>4</sup> ,
- dodekaeder loudspeaker Schalltechnik Süd & Nord type DO12-S <sup>4</sup> ,
- amplifier Norsonic type 215, S.-No. 511 <sup>4</sup> ,
- noise generator NTi Audio type Minirator MR-PRO, S.-No. G2P-RAFXW-GO .

### *Test lab:*

The measurements were done in the reverberation room at the Department of Engineering Acoustics, which complies to the ISO 354 [5]. Its volume is 200m<sup>3</sup> and it is equipped with 13 diffusors.

### *Software:*

The sound absorption was calculated with Gnu Octave version 4.4.1 [1].

## 3. Test results

The test results for Shake plane are documented in the certificates in Figure 2 and Figure 4.

The test results for Shake gathered are documented in the certificates in Figure 3 and Figure 5.

---

<sup>1</sup> Class 1 according to EN 61672 part 1 [3]

<sup>2</sup> Class 1 according to EN 61260 part 1 [2]

<sup>3</sup> Class 1 according to EN IEC 60942 [4]

<sup>4</sup> tested by the PTB in Braunschweig regularly

Evaluation based on laboratory measurements. Results obtained with a standard procedure: Interrupted noise method with 3 measurements averaged at each microphone/loudspeaker position. 2 Loudspeaker positions each with 8 microphone positions.																																																																															
No. of the test report: 19010II		Testing institute: Akustik-Prüfstelle der TU Berlin																																																																													
Date: 20.5.2019		Signature:
