ROHI GAINS ISO 14001 CERTIFICATION FOR ITS ENVIRONMENTAL MANAGEMENT SYSTEM

As a family business, rohi has always been aware of its social responsibility and the impact the company has on the environment. Decision-making at the weaving mill has for generations focused on respect for people and nature. These are the foundations for rohi now investing in an environmental management system compliant with ISO 14001. The successful certification of its environmental management system will help rohi to further reduce waste, costs and risks, and thereby work in a more environmentally friendly way.

ISO 14001 is an international standard that helps companies design and implement environmental management systems. The structured framework enables rohi to systematically record, measure and improve the use of natural resources and waste disposal, as well as to reduce our greenhouse gas emissions.

Certification has involved DEKRA auditors carefully examining all the processes in the rohi environmental management system to ensure they are appropriate and effective. Environmental aspects in various departments were examined, ranging from ecological criteria when selecting suppliers through to environmentally aware production and handling of waste sorting and disposal. The system implemented by rohi meets the requirements of the DIN EN ISO 14001 standard and will be further developed through continuous optimisation.
